

SURNAMES OF THE ASTRONOMERS IN THE NAMES OF THE LUNAR OBJECTS.

S. G. Pugacheva, V. V. Shevchenko.

Sternberg State Astronomical Institute, Moscow University, Moscow, Russia

The whole complex information about toponymy, morphology, selenographical coordinates and dimensions of the lunar objects was included in the automated information system for the Lunar Nomenclature. The database is constructed in the form of logical structure of the relational type. The names of the Lunar Nomenclature were systematized in the next categories: the bibliographical information about famous astronomers which surnames were immortalized in the names of the lunar objects, origin and year awarding of the name, selenographical coordinates and dimensions of the lunar objects.

You may receive more detailed information in the Russian version of this article (nomen.pdf).
